The data contained within this report was collected in accordance with the requirements of ISO/IEC 17025:2017. I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. These results relate only to the test article listed in this report. Reports may not be reproduced except in their entirety.

CN: Cannabinoid Profile & Potency [WI-10-17 & WI-10-17-01]

Analyst: JFD

Test Date: 12/16/2020

The client sample was analyzed for plant-based cannabinoids by Liquid Chromatography (LC). The collected data was compared to data collected for certified reference standards at known concentrations.

90293-CN

ID	Weight %	Concentration (mg/g)	
D9-THC	0.168	1.68	
THCV	ND	ND	
CBD	1.86	18.6	
CBDV	ND	ND	
CBG	0.0253	0.253	
CBC	0.113	1.13	
CBN	0.0124	0.124	
THCA	0.240	2.40	
CBDA	10.7	107	
CBGA	0.278	2.78	
D8-THC	ND	ND	
exo-THC	ND	ND	
Total	13.4	134	0% Cannabinoids: (wt%) 10.7%
Max THC	0.379	3.79	Limit of Quantitation (LOQ) = 0.0067 wt%
Max CBD	11.2	112	Limit of Detection (LOD) = 0.0032 wt%

Ratio of Total CBD to THC 29.7:1

Max THC (and Max CBD) are calculated values for total cannabinoids after heating, assuming complete decarboxylation of the acid to the neutral form. It is calculated based on the weight loss of the acid group during decarboxylation: Max THC = (0.877 x THCA) + THC. This calculation does not include other cannabinoid isomers (eg. D8-THC and exo-THC). ND = None detected above the limits of detection (LOD), which is one third of LOQ.

TP: Terpenes Profile [WI-10-27]

Analyst: AEG

Test Date: 12/16/2020

Client sample analysis was performed using full evaporative technique (FET) headspace sample delivery and gas chromatographic (GC) compound separation. A combination of flame ionization detection (FID) and/or mass spectrometric (MS) detection with mass spectral confirmation against the National Institute of Standards and Technology (NIST) Mass Spectral Database, Revision 2017 were used. Chromatographic and/or mass spectral data were processed by quantitatively comparing the analytical peak areas against calibration curves prepared from certified reference standards.
